

Toothed belt axes EGC-TB-KF, with recirculating ball bearing guide

FESTO

Festo core product range
Covers 80% of your automation tasks

Worldwide:

Always in stock

Superb:

Festo quality at an attractive price

Easy:

Simplified procurement and warehousing

Generally ready for dispatch from the factory within 24 hours
In stock at 13 Service Centres worldwide
More than 2200 products

Generally ready for dispatch from the factory within 5 days
Assembled for you at 4 Service Centres worldwide
Up to 6×10^{12} variants per product series

Just look
for the
star!

Selection aid

Overview of toothed belt and spindle axes

Toothed belt axes

- Speeds of up to 10 m/s
- Acceleration of up to 50 m/s²
- Repetition accuracy of up to ±0.08 mm
- Strokes of up to 8500 mm (longer strokes on request)
- Flexible motor mounting

Spindle axes

- Velocities of up to 2 m/s
- Acceleration of up to 20 m/s²
- Repetition accuracy of up to ±0.003 mm
- Strokes of up to 3000 mm

Coordinate system

Toothed belt axes

Type	F _x [N]	v [m/s]	M _x [Nm]	M _y [Nm]	M _z [Nm]	Characteristics
Heavy-duty recirculating ball bearing guide						
EGC-HD-TB						
	450	3	140	275	275	• Flat drive unit with rigid, closed profile • Precision DUO guide rail with high load capacity • Ideal as a base axis for linear gantries and cantilever axes
	1000	5	300	500	500	
	1800	5	900	1450	1450	
Recirculating ball bearing guide						
EGC-TB-KF						
	50	3	3.5	10	10	• Rigid, closed profile • Precision guide rail with high load capacity • Small drive pinions reduce required driving torque • Space-saving position sensing
	100	5	16	132	132	
	350	5	36	228	228	
	800	5	144	680	680	
	2500	5	529	1820	1820	
ELGA-TB-KF						
	350	5	16	132	132	• Internal guide and toothed belt • Precision guide rail with high load capacity • Guide and toothed belt protected by cover strip • High feed forces
	800	5	36	228	228	
	1300	5	104	680	680	
	2000	5	167	1150	1150	
ELGA-TB-KF-F1						
	260	5	16	132	132	• Suitable for use in the food zone • "Clean look": smooth, easy-to-clean surfaces • Internal guide and toothed belt • Precision guide rail with high load capacity • Guide and toothed belt protected by cover strip
	600	5	36	228	228	
	1000	5	104	680	680	
ELGC-TB-KF						
	75	1.2	5.5	4.7	4.7	• Internal guide and toothed belt • Precision guide rail with high load capacity • Guide and toothed belt protected by cover strip
	120	1.5	29.1	31.8	31.8	
	250	1.5	59.8	56.2	56.2	
ELGR-TB						
	50	3	2.5	20	20	• Cost-optimised rod guide • Ready-to-install unit • Linear bushings with high load capacity for dynamic operation
	100	3	5	40	40	
	350	3	15	124	124

Key features

At a glance

- Generously sized profiles with an optimised cross section afford maximum rigidity and load capacity
- Velocity, acceleration and torque resistance set a new standard
- Numerous sizes and variants such as protected guides open up a broad range of applications
- Due to the EGC's high performance it is often possible to use a smaller size
- Space-saving position sensing possible via proximity switch in the profile slot
- Toothed belt material can be selected from:
 - Chloroprene rubber for long service life
 - Coated PU with steel reinforcements for long service life and resilience to certain cooling lubricants
- Wide range of options for mounting on drives
- Comprehensive range of mounting accessories for multi-axis combinations
- EX3: for use in potentially explosive areas

Flexible motor mounting

The motor position can be freely selected on 4 sides and can be changed at any time.

Comprehensive range for the most varied load conditions

Characteristic values of the axes

The specifications shown in the table are maximum values.

The precise values for each of the variants can be found in the relevant data sheet in the catalogue.

Version	Size	Working stroke [mm]	Velocity [m/s]	Repetition accuracy [mm]	Feed force [N]	Guide characteristics

Characteristics

Slide variants

Standard slide

Extended slide

Additional slide

Guide options

Protected version

- The protected guide cleans the guide rail and protects the recirculating ball bearing guide with the aid of an additional wiper seal

With central lubrication

→ Page 23

- The lubrication adapter enables the guide to be permanently lubricated using semi or fully automatic relubrication devices
- The adapters are suitable for oils and greases
- Both lubrication adapters must be connected

Displacement encoder

→ Page 14

- The position of the slide can be sensed directly when using the incremental displacement encoder. This means that all elasticities of the drive train can be detected and can be corrected by the motor controller.

Clamping unit

→ Page 15

- 1- or 2-channel design, for holding loads
- Reliable holding is guaranteed since the forces act directly on the slide
- A limited number of emergency braking operations are permissible with the sizes 120 and 185

Characteristics

Complete system comprising toothed belt axis, motor, motor controller and motor mounting kit

Toothed belt axis with recirculating ball bearing guide

Motor

→ Page 46

Servo motor:
EMMT-AS, EMME-AS, EMMS-AS
Stepper motor:
EMMS-ST

Note

For the toothed belt axis EGC and the motors, there are specially adapted complete solutions.

Servo drive

Servo drive:
CMMT-AS
Servo drive for extra-low voltage:
CMMT-ST

Motor mounting kit

→ Page 46

Axial kit

Kit comprising:

- Motor flange
- Coupling housing
- Coupling
- Screws

Peripherals overview

Peripherals overview

Variants and accessories			
	Type/order code	Description	→ Page/Internet
[1]	Emergency buffer with retaining bracket A	For avoiding damage at the end stop in the event of malfunction	59
[2]	Shock absorber with retaining bracket C	For avoiding damage at the end stop in the event of malfunction	59
[3]	Centring pin/sleeve ZBS, ZBH	- For centring loads and attachments on the slide - Included in the scope of delivery: - For size 50, 70: 2x ZBS-5 - For size 80, 120, 185: 2x ZBH-9	59
[4]	Clamping unit 1H...PN, 2H-PN	For holding loads	15
[5]	Switch lug X, Z, O, P, W, R	For sensing the slide position	56
[6]	Sensor bracket O, P, W, R	Adapter for mounting the inductive proximity switches (round design) on the axis	57
[7]	Proximity switch, M8 O, P, W, R	- Inductive proximity switch, round design - The order code O, P, W, R includes 1 switch lug and max. 2 sensor brackets in the scope of delivery	<?>
[8]	Axial kit EAMM	For axial motor mounting (comprises: coupling, coupling housing and motor flange)	46
[9]	Motor EMME, EMMS	Motors specially matched to the axis, with or without gear unit, with or without brake	46
[10]	Drive shaft K	- Can, if required, be used as an alternative interface - No drive shaft is required for the axis/motor combinations → from page 46 onwards	58
[11]	Slot cover B, S	For protection against contamination	59
[12]	Proximity switch, T-slot X, Z	- Inductive proximity switch, for T-slot - The order code X, Z includes 1 switch lug in the scope of delivery	60
[13]	Connecting cable V	For proximity switch (order code W and R)	61
[14]	Clip CL	For mounting the proximity switch cable in the slot	59
[15]	Slot nut Y	For mounting attachments	59
[16]	Adapter kit DHAM	For mounting the support profile on the axis	60
[17]	Support profile HMIA	For mounting and guiding an energy chain	60
[18]	Profile mounting M	For mounting the axis on the side of the profile	52
[19]	Adjusting kit EADC-E16	For mounting the axis on a vertical surface. Once mounted, the axis can be aligned horizontally	55
[20]	Central support EAHF-L5	For mounting the axis on the profile from underneath	53
[21]	Adjusting kit EADC-E15	Is height-adjustable. Can be used to easily compensate for any unevenness in the bearing surface	54
[22]	Foot mounting F	For mounting the axis on the end cap	51
–	Guide axis EGC-FA	Axis without drive	egc-fa
–	Connecting shaft KSK	For connecting two toothed belt axes EGC-TB in 3-dimensional gantries	ksk

EGC-...-2H...-PN [kg mm ²]	—	—	266.5	1584	11317	

The mass moment of inertia J_A of the entire axis is calculated as follows:

$$J_A = J_0 + K \times J_W + J_H \times \text{working stroke [m]} + J_L \times m_{\text{payload [kg]}} + J_F$$

K = Number of additional slides

Data sheet

Materials

Sectional view

Size	50	70	80	120	185
[1] Drive cover	Anodised wrought aluminium alloy				Painted wrought aluminium alloy
[2] Guide rail	High-alloy steel				
[3] Toothed belt					
EGC...	Polychloroprene with glass cord and nylon coating				
EGC...-PU2	Polyurethane with steel cord and nylon covering				
[4] Slide	Anodised wrought aluminium alloy				
[5] Profile	Anodised wrought aluminium alloy				
[6] Toothed belt pulley	High-alloy stainless steel				
Note on materials	RoHS-compliant				
	Contains paint-wetting impairment substances				

Technical data – Displacement encoder

Dimensions → Page 40

Type	EGC...-M1	EGC...-M2
Resolution [µm]	2.5	10
Max. travel speed with displacement encoder [m/s]	4	4
Encoder signal	5 V TTL; A/A, B/B; reference signal (N/N) cyclical every 5 mm (zero pulse)	
Signal output	Line driver, alternating, resistant to sustained short circuit	
Electrical connection	8-pin plug, round design, M12	
Cable length [mm]	160	

Operating and environmental conditions – Displacement encoder

Ambient temperature [°C]	-10 ... +70
Degree of protection	IP64
CE marking (see declaration of conformity)	In accordance with EU EMC Directive1)

1) For information about the area of use, see the EC declaration of conformity at: www.festo.com/sp → Certificates.

If the devices are subject to usage restrictions in residential, commercial or light-industrial environments, further measures for the reduction of the emitted interference may be necessary.

Note regarding use

The toothed belt axis with displacement encoder is not designed for the following application examples

- Magnetic field

- Welding application

Data sheet

Technical data – Clamping unit		Dimensions → Page 36		
Size		80	120	185
Pneumatic connection		M5	M5	M5
Clamping type		Clamping via spring force, compressed air to release		
Static holding force				
EGC-...-1H-...-PN	[N]	320	1200	1500
EGC-...-2H-PN	[N]	640	2400	3000
Max. number of emergency braking operations ¹⁾ at reference energy	[J]	–	750 35	750 70
Number of clamping operations under rated load	[millions of switching cycles]	0.45	0.05	> 1.4

1) Emergency braking refers to braking the payload if the drive axis loses power.

Operating and environmental conditions – Clamping unit		
Operating medium		Compressed air to ISO 8573-1:2010 [7:4:4]
Operating pressure		
Clamping unit open	[bar]	4.5 ... 8
Clamping unit closed	[bar]	Unpressurised
Ambient temperature	[°C]	–10 ... +60

**Note**

The axis can only be relubricated with the lubrication adapter (EGC-...-C) when used in combination with the clamping unit.

Data sheet

Characteristic load values

The indicated forces and torques refer to the slide surface. The point of application of force is the point where the centre of the guide and the longitudinal centre of the slide intersect. These values must not be exceeded during dynamic operation. Special attention must be paid to the deceleration phase.

Max. permissible forces and torques for a service life of 5000 km

Size		50	70	80	120	185

Note

For a guide system to have a service life of 5000 km, the load comparison factor must have a value of $f_v \leq 1$, based on the maximum permissible forces and torques for a service life of 5000 km.

If the axis is subjected to two or more of the indicated forces and torques simultaneously, the following equation must be satisfied in addition to the indicated maximum loads:

Calculating the load comparison factor:

$$f_v = \frac{|F_{y1}|}{F_{y2}} + \frac{|F_{z1}|}{F_{z2}} + \frac{|M_{x1}|}{M_{x2}} + \frac{|M_{y1}|}{M_{y2}} + \frac{|M_{z1}|}{M_{z2}} \leq 1$$

F_1/M_1 = dynamic value

F_2/M_2 = maximum value

Data sheet

Calculating the service life

The service life of the guide depends on the load. To be able to make a statement as to the service life of the guide, the graph below plots the load comparison factor f_v against the service life.

These values are only theoretical. You must consult your local Festo contact for a load comparison factor f_v greater than 1.5.

Load comparison factor f_v as a function of service life

Example:

A user wants to move an X kg load. Using the formula (→ page 16) gives a value of 1.5 for the load comparison factor f_v . According to the graph, the guide would have a service life of approx. 1500 km. Reducing the acceleration reduces the M_z and M_y values. A load comparison factor f_v of 1 now gives a service life of 5000 km.

Note

Engineering software
PositioningDrives
www.festo.com

The software can be used to calculate a guide workload for a service life of 5000 km.

$f_v > 1.5$ are only theoretical comparison values for the recirculating ball bearing guide.

Comparison of the characteristic load values for 5000 km with dynamic forces and torques of recirculating ball bearing guides

The characteristic load values of bearing guides are standardised to ISO and JIS using dynamic and static forces and torques. These forces and torques are based on an expected service life of the guide system of 100 km according to ISO or 50 km according to JIS.

As the characteristic load values are dependent on the service life, the maximum permissible forces and torques for a 5000 km service life cannot be compared with the dynamic forces and torques of bearing guides to ISO/JIS.

To make it easier to compare the guide capacity of linear axes EGC with bearing guides, the table below lists the theoretically permissible forces and torques for a calculated service life of 100 km. This corresponds to the dynamic forces and torques to ISO.

These 100 km values have been calculated mathematically and are only to be used for comparing with dynamic forces and torques to ISO. The drives must not be loaded with these characteristic values as this could damage the axes.

Max. permissible forces and torques for a theoretical service life of 100 km (from a guide perspective only)

Stroke reserve

Stroke length

Stroke reserve

The selected stroke corresponds in principle to the required working stroke. The variants GK/GV do not have a wiper seal on the guide. These variants therefore have an additional safety distance between the drive cover and slide that is not designated as part of the working stroke.

A safety distance (similar to GK/GV) between the drive cover and slide can be defined for the variants GP/GQ and GK-C/GV-C using the modular product system via the "stroke reserve" characteristic. With the variants GK/GV, the stroke reserve and safety distance are added for each end position.

- The stroke reserve length can be freely selected
- The sum of the stroke length and 2x stroke reserve must not exceed the maximum working stroke

Example:

EGC-70-500-TB-KF-20H-...

Working stroke = 500 mm

2x stroke reserve = 40 mm

Total stroke = 540 mm

(540 mm = 500 mm + 2x 20 mm)

Size	50	70	80	120	185
L9 = safety distance with GK/GV [mm] (per end position)	–	10.5	13	18	21

Working stroke reduction

With standard slide GK/GP / extended slide GV/GQ with additional slide KL/KR

- For a toothed belt axis with additional slide, the working stroke is reduced by the length of the additional slide and the distance between the two slides
- If the variant GP/GQ is ordered, the additional slide is also protected
- If the variant GV/GQ is ordered, the additional slide is not extended
- If the variant GK-C/GV-C is ordered, the additional slide is also supplied with lubrication adapters

L16 = Slide length

L18 = Distance between

L17 = Additional slide length

both slides

[1] Additional slide

Example:

Type EGC-70-500-TB-...-GK-KR

Working stroke without

additional slide = 500 mm

L18 = 20 mm

L16, L17 = 100 mm

Working stroke with

additional slide = 380 mm

Working stroke reduction per side

With integrated emergency buffer NPE / shock absorber YSRW with shock absorber retainer KYE

- The working stroke is reduced by the total dimension of the emergency buffer/shock absorber and shock absorber retainer.
- The rubber buffer in the cover must be removed.
- Shock absorbers must not be used in combination with lubrication adapters.

Size		50	70	80	120	185
With emergency buffer	[mm]	30	43	68	98	133
With shock absorber	[mm]	26	42	63	84	107

Working stroke reduction

With integrated clamping unit

- The working stroke is reduced by the length of the clamping unit.
- With 1-channel clamping units, the stroke is reduced on one side with respect to the mounting surface
- With 2-channel clamping units, the stroke is reduced symmetrically with respect to the mounting surface of the load
- Shock absorbers must not be used in combination with the clamping unit.

Data sheet

Maximum permissible support spacing L (without profile mounting MUE/central support EAHF) as a function of force F

In order to limit deflection in the case of large strokes, the axis may need to be supported.
The following graphs can be used to determine the maximum permissible support span l as a function of force F acting on the axis. The deflection is $f = 0.5\text{ mm}$.

Force Fy

- EGC-50
- EGC-70
- EGC-80
- EGC-120
- EGC-185

Force Fz

Recommended deflection limits

Adherence to the following deflection limits is recommended so as not to impair the functionality of the axes. Greater deformation can result in increased friction, greater wear and reduced service life.

Size	Dynamic deflection (moving load)	Static deflection (stationary load)
50 ... 185	0.05% of the axis length, max. 0.5 mm	0.1% of the axis length

Data sheet

Central lubrication

The lubrication adapter enables the guide of the toothed belt axis EGC-TB to be permanently lubricated in applications in humid or wet ambient conditions using semi or fully automatic relubrication devices.

- For size 80, 120, 185
- The modules are suitable for oils and greases.
- The dimensions of the toothed belt axis EGC-TB are the same with and without central lubrication modules.
- Both lubrication adapters must be connected
- There are three connection options on each side
- Can be used in combination with:
 - Standard slide GK
 - Additional slide KL, KR
- Cannot be used in combination with:
 - Protected recirculating ball bearing guide GP

Additional dimensions → Page 31

Structure of a central lubrication system

A central lubrication system requires various additional components. The illustration shows different options (using a hand pump, pneumatic container pump or electric container pump) required as a minimum for designing a central lubrication system. Festo does not sell these additional components; however, they can be obtained from the following companies:

- Lincoln
- Bielomatik
- SKF (Vogel)

Festo recommends these companies because they can supply all the necessary components.

- [1] Hand pump
 [2] Pneumatic container pump
 [3] Electric container pump
 [4] Manually operated container pump
 [5] Nipple block
 [6] Distributor block
 [7] Tubing or piping
 [8] Fittings

[5] ... **A** Emergency buffer with retaining bracket A cannot be combined with slide GP, GQ, GK-C, GV-C, shock absorber with retaining bracket C and clamping unit 1H...-PN, 2H-PN

[6] ... **C** Shock absorber with retaining bracket C cannot be combined with slide GP, GQ, GK-C, GV-C, emergency buffer with retaining bracket A and clamping unit 1H...-PN, 2H-PN

[7] ... **K** No drive shaft is required for the axis/motor combinations → from page 46 onwards.

**Note**

The code X, Z includes a switch lug in the scope of delivery.

The code O, P, W, R includes one switch lug and max. two sensor brackets in the scope of delivery.

Accessories

**Note**

Depending on the combination of motor and drive, it may not be possible to reach the maximum feed force of the drive.

Permissible axis/motor combinations with axial kit

Accessories

Mounting options between axis and support profile

Depending on the adapter kit, the spacing between the axis and the support profile is:
 $x = 20 \text{ mm}$ or 50 mm

The support profile must be mounted using at least 2 adapter kits. For longer strokes, an adapter kit must be used every 500 mm.

Example
